

# WINE LIST

LET'S GO GREEN FOR SPRING!!!!!!

Organic wines are gaining in popularity, but what is "organic" or "sustainable" or "biodynamic" We are proud to present some great finds and information on this new trend!!!  
Enjoy!!!

The U.S. government regulates the use of the term organic, but sustainable and biodynamic have no legal definitions. So I'll start with organic: there are two types of organic listings on wine bottles. Wines can be made from certified organically grown grapes, avoiding any synthetic additives, or, to take it a step further, organic wines are made from organically grown grapes, and are also made without any added sulfites (though naturally occurring sulfites will still be present).

Biodynamic is similar to organic farming in that both take place without chemicals, but biodynamic farming incorporates ideas about a vineyard as an ecosystem, and also accounting for things such as astrological influences and lunar cycles. A biodynamic wine means that the wine was made without common manipulations such as yeast additions or acidity adjustments.

Sustainability refers to a range of practices that are not only ecologically sound, but also economically viable and socially responsible. Sustainable farmers may farm largely organically or biodynamically but have flexibility to choose what works best for their individual property: they may also focus on energy and water conservation, use of renewable resources and other issues.

- **QUIVARA ZINFANDEL:** Dry Creek Valley, CA: 2008. Biodynamic Farming.

By the Glass: 7.50    By the Bottle: 29    To Go: 21

- **FORIS PINOT NOIR: OREGON:** 2008. Biodynamic Farming

By the Glass: 6.5    By the Bottle: 25    To Go: 18
